

WIN

One of two
Waste King
Waste Disposal Units
...with air switches

HOW TO ENTER

Just answer three simple questions for your chance to win this great prize:

- Q:** How long have Waste King been making waste disposal units for?
- Q:** How much more twisting power do Waste King units have over their competitors?
- Q:** What harmful gas emission is reduced by using a Waste King?

Email your answer – which can be found on this page – to: mdowns@unity-media.com

**Competition closes
16th December 2013**

Why Waste King? Waste King is the biggest disposer brand globally and consistently rated as the number one product by independent reviewers such as US Consumer Reports Magazine. Now it is available in the UK and EC from The Hunter Fan Company who have been appointed exclusive distributors. Waste King not only makes the best performing units on the market but they last longer than anyone else's and are the only company to offer a Lifetime Warranty. Waste King has made them for over 50 years and is the second biggest producer globally.

What Makes Waste King Better?

High Speed: They run at 2,700 rpm which is 60 per cent higher than others and results in 3 times the cutting power to the teeth. This prevents jams and flushes away the debris very efficiently thus quickly saving time, water and electricity.

Maximum Starting Torque: Waste King motors have 30 per cent more twisting power than any other brand due to the use of permanent magnets which reach full speed in the first turn. This also means no jams, no auto-reverse and no hassle.

Unique, Robust Long-Lasting Design: The Waste King uses stainless-steel cutters, fast and easy mounting systems, tougher grinding chambers also with a lifetime corrosion guarantee for long performance, and a large opening for grinding with removable splash guards for easy inspection.

Sound Insulation: The Waste King is designed to minimise noise with high performance insulation.

Recycle Your Waste

19m tonnes of food waste a year is dumped into landfills in the UK which rots down to produce harmful carbon dioxide and methane gases. With a Waste King, however, it ends up at the sewage treatment works where it is broken down into sewage sludge. This is then converted into biogas and then electricity thus reducing carbon emissions. It is a double-win for the environment.

The Wise Choice

A Waste King immediately stops unwanted mess and leaking bags. This saves on unwanted vermin and insects as well as bad smells. It also saves the valuable space lost to storage of the bags – essential for city life where space is a premium! ■
